

We make wireless data work

AirLink Wireless ACE

AirLink offers a complete family of products that include both end-user software applications and APIs designed to allow vertical market integrators, developers, and end-users to take advantage of AirLink's technology. These products are the latest in innovative, productivity-enhancing mobile solutions for companies in a wide variety of markets.

PinPoint modems are designed for commercial applications and are the perfect choice for AVL/Dispatch and Public Safety applications. In addition to the rugged industrial design, the embedded software can be customized to include all or part of a remote application.

AirLink's customers come from a variety of industries, and use the products for everything from monitoring oil wells in Oklahoma to tracking tour bus fleets in Hawaii; anywhere there is a need for critical instant wireless information.

Wireless ACE, the AirLink Configuration Executive tool, is available for use with all AirLink modems. With ACE you can control and configure your AirLink modems and interrogate the operational status of the modem

Wireless Expert

ACE lets you configure your wireless modems locally over a serial connection, or remotely over the network. With ACE, you can significantly reduce troubleshooting time and support costs. You can monitor the modem operations both locally and remotely.

Numerous context sensitive screens are available to help with configuration. Each modem is equipped with a password. Changes can not be made to the modem without the password.

We make wireless data work

AirLink Configuration Executive

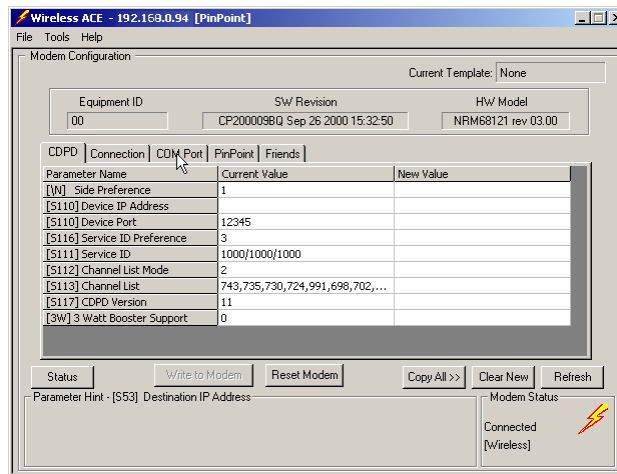

Features:

- Operates with PinPoint and Raven modems
- Reconfigure modems remotely
- Password protected
- Runs under Windows 98, 2000, and NT
- Templates for multiple modem deployments
- Configurable modem status updates

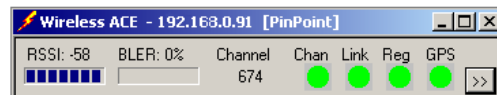

Various screens allow many configuration options to be set and checked.

A template lets you save modem values in a file that can be reused, greatly simplifying deployment of multiple modems.

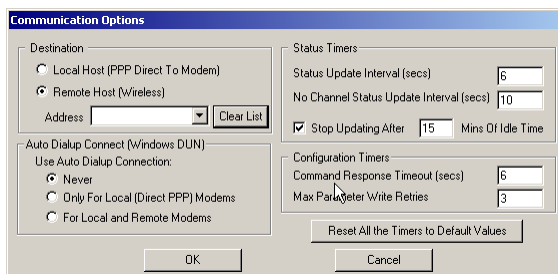

ACE runs on Windows 98, 2000 or NT. ACE is available from AirLink for no cost.

ACE enables you to configure your modems remotely.

ACE gives you real-time status on your modems.
